The Single Market

1 What is the Single Market?

The Single Market was designed to strengthen European integration by removing barriers in order to ensure fair competition and promote cooperation and solidarity between member states.

It is based on **four freedoms** - the free movement of:

Goods - products can be bought and sold across member states' borders without customs duties or most trade barriers.

Services - businesses and professionals can offer services in other member states.

Capital – money can move freely between member states, including investments and payments.

Persons – people can live, work, study, and travel in other member states, subject to some rules.

It requires the harmonisation of national legislation and common standards across the EU.

It is accompanied by policies aimed at ensuring a fair, coherent and sustainable market for all (competition policy, cohesion policy, social legislation for workers, etc.)

The 27 EU Member States are part of it, as are the three other members of the European Economic Area (Norway, Iceland and Liechtenstein) and Switzerland benefits from it through bilateral agreements

1958 The Single Market was identified as early as the Treaty of Rome (TEC) by the six founding members of the European Economic Community*

1970 The Single European Act provided the first concrete legal framework for establishing the Single Market. It was the European Commission's vision chaired by Jacques Delors since 1985.

1985 **The Single Market actually came into force**

2020 Today it represents:

- 452 million consumers
- €18 trillion in GDP**
- 80% of national legislation stems from decisions taken in Brussels

Since 1993

Unlike the rest of the world, the single market has not seen major advances and certain markets have remained fragmented at national level, effectively undermining with important consequences for the EU's economy.

In 1993, when it was established:

In 2020:

EU Member States:

CHINA
2nd economy worldwide

EU
neck and neck with the rest of the 27

More recently, the rise of China in Chinese marks the return of high intensity warfare in Europe

The single market, as it stands today, is a project designed for yesterday's world, facing challenges that call for much deeper integration.

2 Assessment of the current market: where do we stand?

The European economy remains fragmented across different national markets in several areas:

Once initially excluded for strategic and political reasons from Single Market, these sectors now need European scale to operate in a world where size means power.

The financial sector

Europe's private savings are abundant – but not channelled sufficiently into its strategic needs.

Much of Europe's savings remain fragmented across economies, especially the United States.

Held in current accounts (€4,500 billion*)

Generating low returns

€300 billion each year*

The European capital market is highly fragmented:

- Almost as many stock exchanges as there are Member States (only two in the US),
- 14 clearing houses,
- 20 securities,
- different pension systems and national supervisors that do not coordinate sufficiently.

This fragmentation has a measurable consequence:

European market capitalisation was lower (total of listed companies) :

- 68% of European GDP
- 177% in the United States

As of 2021

- $4.7 trillion
- $68.940 billion (a 15-fold increase)

Market capitalisation (as a % of GDP) from 1975 to 2020

Source: World Federation of Exchanges database

Europe's savings are not sufficiently financing its real economy, weakening investment, innovation and growth

Electronic communications

27 separate national markets + 100 telecom operators

3 major operators

An average European operator serves:

The rollout of 5G is lagging behind at an alarming rate and without consolidation in the sector, Europe risks missing the boat on 6G and AI.

Energy sector

The European energy market proved resilient during the 2022 crisis:

- no power cuts and effective management of the disruption to Russian supplies.

But also revealed vulnerabilities:

- industrial electricity prices:
  - twice as high as in the United States
  - vary significantly between Member States, penalising energy-intensive industries and SMEs in certain regions

Retail electricity prices for industry (base 100 for the European Union in 2015 based on price estimates in € per MWh)

Source: International Energy Agency (IEA), Energy Prices and Taxes, 4th Quarter 2020 – Note: Prices in some Asian countries are subsidised by governments. Prices in the European Union and the United Kingdom are for medium-sized industrial consumers.

Insufficient interconnections and fragmented national subsidies distort competition within the EU.

Excessive dependence on external suppliers, fossil fuel imports remain massive

Lack of joint European-level procurement of critical raw materials

No single agency to support new technologies (hydrogen, renewables)

Up to €564 billion

Investment required in electricity networks.

3 The next steps towards an integrated market: the 'One Europe, One Market' agenda

Here is a case for furthering integration, the signing of a joint "One Europe, One Market" by the three European institutions (Commission, Council, Parliament) with a target date of the end of 2027.

One Europe, one market: a framework for completing the single market

The European agenda for the Single Market is structured around the issues set in the **Letta** report:

CROSSED BY THREE HORIZONTAL FACILITATORS:

- DIGITAL
- CLIMATE CHANGE & ENVIRONMENT PROTECTION
- RESEARCH & INNOVATION
- COHESION & SOCIAL

THREE SECTORAL UNIONS:

- FINANCE
- DIGITAL
- ENERGY

European agenda for the next steps for the Single Market:

MEASURES	EXPLANATIONS	DATES
Harmonised public procurement	Harmonisation of public procurement procedures	End of 2027
EU securitisation	Allowing banks to "package" their loans and resell them	End of 2026
Market Integration and Supervision Package	Transfer to ESMA* of direct supervisory powers over large cross-border entities, integration of market rules and harmonisation of listing rules	End of 2026
Digital euro	Central bank digital currency	June 2026
Digital Networks Act / Simplification / Competitiveness Framework	Simplification and harmonisation of regulatory requirements relating to AI for businesses	June 2026
Unified cybersecurity	Replacement of the 27 national certification and supervision frameworks with a single framework	End of 2026
Digital Infrastructure Package	Single passport enabling a telecoms operator to "roll out networks in all Member States simply by notifying just one regulatory authority"	End of 2027
Energy highways	Eight electricity interconnection corridors	Launch - April 2026
European Energy Savings Package	Harmonisation of rules, building permits with simplified procedures for renewable energy, cost-sharing between Member States,	72 2026
The 5th freedom	Free movement of research, innovation, data, skills and talent within the EU (recognised diplomas and qualifications, common career framework, etc.)	End of 2027
Electronic pooling of workers	Single online declaration when a company temporarily posts employees to another Member State	June 2027
Labour mobility	Better mutual recognition of qualifications and transferability of skills	Q3 2027
Supplementary pension schemes	Harmonisation of rules to make pension funds operable across borders.	End of 2026
Critical Raw Materials Centre	European joint procurement mechanisms for critical raw materials (lithium, cobalt, gallium, etc.)	End of 2026
Digital sovereignty	Investment and development in AI computing capacities, cloud infrastructure, digital platforms and blockchain technologies	End of 2026-2027
The 28th regime or EU Inc.	New legal status allowing companies to operate throughout the EU without additional formalities	End of 2026

EU leaders will review progress quarterly and provide further strategic guidance where needed.
