

European Year of Skills 2023

2023, European Year of Skills : why?

The **green and digital transitions** are having a major impact on the labour market, workers and their skills.

DESTRUCTIONOF JOBS

10% to 15% of jobs will be lost to automation according to Eurofound.

The transition to a low-carbon economy will result in job losses in sectors such as fossil fuels and carbon-intensive industries.

CONVERSION OF JOBS

Adopting more sustainable lifestyles and working habits will have an impact on existing jobs - in some sectors more than others, such as agriculture and construction.

According to the OECD, 32% of jobs face significant upheaval due to automation.

CREATION OF JOBS

The digital transition is creating jobs in sectors such as robotics, data analysis and cybersecurity.

The European Commission forecasts the creation of 2.5 million jobs by 2030 linked to the ecological transition.

Need to reskill workers to ensure that nobody is left behind

Need to upgrade skills

Need to train workers in new jobs to avoid skills shortages

Sources: OECD, Nedelkoska, L. and Quintini, G (2018), Automation, skills use and training; European Commission (2022), Digital Economy and Society Index, Cedefop (202

Developing Europeans' skills

an important driver of the transitions underway.

Lifelong learning enables Europeans to be more resilient in taking advantage of future transformations and is an opportunity to be agents of change.

A workforce with the skills that companies need limits labour shortages in the EU and improves companies competitiveness.

Despite the necessity to foster a real culture of lifelong learning, **adult learning systems** are facing a set of challenges of various degrees depending on the country:

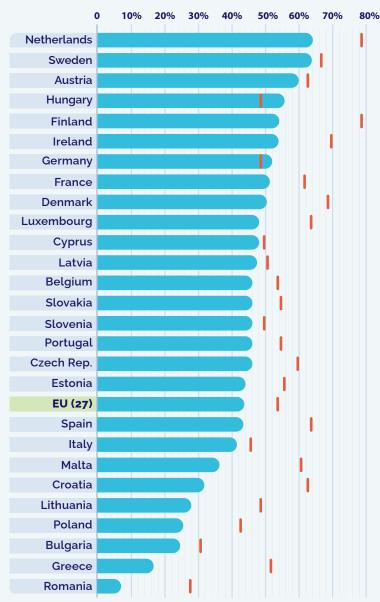

Training courses that do not meet labour market needs or are of poor quality

A lack of investment and coordination in terms of governance

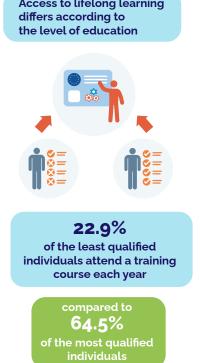

Strengthening the skills of European citizens – Achieving the 2030 targets

Participation in training

2016
Participation rate
43.7%

Access to lifelong learning differs according to

Sources: Eurostat, data for 2016; European Commission (2022), Digital Economy and Society Index

 Participation rate in a training course over the last 12 months (24-65 year-olds) Percentage of the population` with basic digital skills

Why don't Europeans participate more in training opportunities?

80% of individuals who do not participate in training do not want to, particularly because they think that they do not really need further training.

For those who would like to attend training but do not, the three main obstacles are: a lack of time, high costs and family obligations.

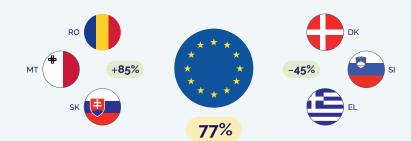

A labour force with the skills companies need

Percentage of companies experiencing difficulties in finding applicants with the required skills

The EU has set itself a twofold target:

1. Developing science, technology, engineering and mathematics (STEM) skills

2019

7.8 millions

million specialists in information and communication technology (ICT)

20 millions

Currently, only 6 out of 10 adults have basic digital skills

Target 80%

2030

Correct the gender imbalance in these fields 2.

2021

Less than 20%

of individuals employed as ICT specialists are women

in three STEM graduates

European Parliament

Member States

Social partners

Public and private employment services

Education and training partners

Companies

Chambers of Commerce and Industry

ompanies

Workers

Promoting higher, more effective and inclusive investment in training

Matching people's aspirations and skill sets with opportunities on the job market, especially for the green and digital transitions

Attracting individuals from third countries with the skills the EU needs, including by facilitating the recognition of qualifications

Making sure that skills are relevant for labour market needs, including by cooperating with social partners

A special focus will be given to activate more people for the labour market, in particular women and young people, especially those not in education,

employment or training

To achieve this, the Commission...

will launch events and awareness-raising campaigns to support the sharing of best practices

will develop strategic skills monitoring tools and will adopt initiatives aimed at facilitating the recognition of qualifications

will support the use and monitor the **effectiveness of existing European initiatives and funding** for skills

Overview of EU initiatives to promote skills development

European legislation, particularly on individual learning accounts and micro-credentials

Pact for Skills (includes more than 1000 organisations and 14 large-scale partnerships in strategic sectors)

The European Skills Agenda (framework for EU skills policy cooperation)

Recommendations for Member states as part of the European semester for their economic and social policies

The EU Digital Skills and Jobs Coalition (which brings together Member States, social partners, companies, non-profit organisations and education providers)

The European Digital Skills and Jobs Platform (information and resources on digital skills, in particular a self-assessment tool and training and funding opportunities)

Overview of EU funding instruments to invest in skills
